SUMMARY

Frontend Team Lead running a Nuxt 4 / Vue 3 team in production, with 7+ years across the JavaScript ecosystem. Led 5 engineers at Jack Westin (2022–2026), a US EdTech platform serving thousands of daily active students: owned architecture and technical strategy, designed REST API contracts with the backend lead, broke PRDs into phased delivery, and ran frontend hiring. Built a shared design-system and core-logic library (Storybook, 95%+ coverage, 4 consumer apps) and a micro-frontend integration for marketing. In parallel, held a part-time architecture and advisory role at Thales MFI (German crypto asset management), delivering a real-time multi-chain, multi-exchange portfolio tracker in Nuxt 4, NestJS, and Bun. Deep in Vue/Nuxt; early adopter of new tooling (Bun, Hono, AI SDK, MCP) and quick to pick up new stacks.

EXPERIENCE

Jack Westin

Remote, full-time

Frontend Team Lead Sep 2022 – Aug 2026

Senior Frontend Developer Jan 2022 – Sep 2022

- Led a team of five frontend engineers building Vue 3 / Nuxt 4 applications used by thousands of daily active students. Owned architecture, technical strategy, and delivery planning; designed REST API contracts with the backend lead; broke PRDs into phased milestones; and ran hiring end to end — screened 40+ candidates and made 3 hires.
- Designed and built a shared design-system and core-logic library (Storybook, Vitest, 95%+ test coverage), published as versioned npm packages via GitHub Packages and consumed by four applications.
- Delivered reusable components and business logic to marketing through a micro-frontend architecture embedded in their WordPress site, removing duplicate implementations across stacks.

Stack: Vue 3, Nuxt 4, TypeScript, Storybook, Vitest, Laravel, AI SDK

Thales MFI GmbH

Germany (remote), part-time

Technical Consultant & Full-stack Engineer Jan 2024 – Apr 2026

- Architected and built a real-time crypto portfolio tracker (Nuxt 4, Bun, TypeScript) that lets asset managers register client wallet addresses and exchange API keys and monitors assets, positions, and orders across 16 blockchains and 12 exchanges. Delivered live analytics, charts, and configurable alerts for advisor recommendations.
- Built a project resource-management system (Nuxt 4, NestJS) for planning team members, time allocation, and compensation.
- Built a private MCP server (Hono, Bun) exposing the company's internal data and operations as tools for AI coding agents, so the CTO could prototype new product ideas against production systems.

Stack: Nuxt 4, TypeScript, Bun, NestJS, Hono

FARO Creaform

Germany (remote), part-time

Full-stack Engineer Aug 2021 – Jan 2022

Part-time remote full-stack engineering for FARO Creaform in Germany, concurrent with Joorchin. Built Node.js / TypeScript / Express REST services and Vue / Vuetify admin dashboards with full test coverage under enterprise codebase standards.

Stack: Node.js, TypeScript, Express, Vue, Vuetify

Joorchin Digital Marketing AgencyIran, full-time

Frontend DeveloperAug 2021 – Jan 2022

Frontend development for a digital marketing agency in Iran. Translated Figma designs into responsive Vue and WordPress front-ends for client web builds.

Stack: Vue, WordPress, JavaScript

XankooIran, full-time

Web DeveloperMay 2019 – Jul 2021

Xankoo is an SEO-tooling startup agency. I built the customer-facing SEO dashboard in Vue on a Laravel backend: keyword research and suggestions, daily tracking of Google indexing and ranking positions, and on-page and technical SEO utilities. I also implemented scheduled rank-tracking views, historical trend charts, and alerting so clients could see ranking changes without manual checks, and developed WordPress themes and plugins for agency clients that integrated with the dashboard data.

Stack: Vue, Laravel, PHP, WordPress
